# JOINT SAFETY TOURS

## The new safety ritual of the Group

### Joint safety tours imply:

- Implementing a **ritual** like the safety moments
- Being **actively listening and visible in the field**, through interactions with the workforce about their challenges
- Being **together**: Group entities and affiliates with their contractors to share safety value
- Focusing on **high-risk activities**: work at height, work on powered systems, lifting operations, work in confined spaces, hot work.
  
- **Who performs joint safety tours ?** The entire management team
- **How often?** Regular frequency (daily, weekly, monthly) is particularly important. It should not be a blocking point: common sense and practicality help overcome obstacles to go to the field.
